LEAGUE: Unveiling the Highlights of Our Latest Events

The last few months have seen a few significant events for the LEAGUE project. The summer season of activities began in June with the active participation of representatives of the LEAGUE team at the annual “Victim Support Europe” conference in Berlin, Germany. Victim Support Europe works with and provides support to organisations working in the field of victim services, both within the European Union and globally. In addition, VSE works as an advocacy organisation, focusing on influencing policy decisions by raising awareness of the needs and rights of crime victims among policy makers and the public.

During the workshop segment entitled “In-Depth Case Examples of Violations of Fundamental Freedoms”, the LEAGUE project team took the lead in conducting a workshop on the crucial issue of “Boys’ Right to Freedom from Sexual Abuse and Exploitation Online”. This was a remarkable opportunity for our team to not only share the overarching aims and aspirations of the project, but also to showcase the tangible outcomes that have resulted from our dedicated efforts.

This workshop allowed us to engage with a diverse and broad audience with different backgrounds and perspectives. It served as a platform to present the project’s vision, goals, and the significant progress we’ve made so far. Using the educational materials and resources developed by the project, we were able to illustrate the far-reaching impact and visibility that the LEAGUE project has already achieved.

At the end of September, Vienna played host to the eagerly anticipated second edition of the LEAGUE International Training event. The event brought together a dynamic and diverse cohort of 24 participants, representing an impressive total of 13 countries.

This gathering was far from an ordinary training event. It was a testament to the spirit of collaboration and innovation that defines the LEAGUE project. The central theme of the training revolved around the intricacies of artificial intelligence - a subject of immense relevance and profound impact in today's ever-evolving technological landscape.

The programme unfolded as a multi-faceted experience that not only delivered informative sessions, but also fostered an environment where participants honed their skills and enriched their understanding of artificial intelligence. However, the heart of the event was the vibrant symposium, which brought together a community of like-minded individuals with a shared passion for learning and innovation. Beyond the informative sessions, it was a melting pot of ideas, perspectives, and experiences. The lively and insightful discussions created an atmosphere where knowledge flowed freely, crossing boundaries, and fostering an environment of collaborative growth.

One of the most striking aspects of this event was the diverse and enriching exchange of expertise. Participants, each with a unique professional and educational background, generously shared their insights, bridging the gap between theory and practice. As a result, this remarkable gathering not only formed partnerships, but also celebrated a wide range of different perspectives, opinions, and values.

As the LEAGUE project is coming to an end, we would like to give you some additional information about the final activities. At the moment, the whole consortium is organising and running the national trainings, bringing the topic to the attention of (school) psychologists, teachers and parents. The LEAGUE chatbot is also in the final stages of development and will soon be available to users of the internet platform.

We will keep you informed about the latest updates on our website as well as social media channels!
